Mini Weather Forecast

light-weight-clothes-matching

Functions

Our software “Mini Weather Forcast” can get the weather(including the **temperature**, **wind scale**) of different cities all over the world, and can also give you the choice what **clothes** you can choose to wear based on the current weather outside.

Analyzing the data, and pick lastest 3 days as **specific output(if rain turns red)**, and **a bar graph** showing the weather of lastest 7 days.

Methods

Input

The *city* your want to check

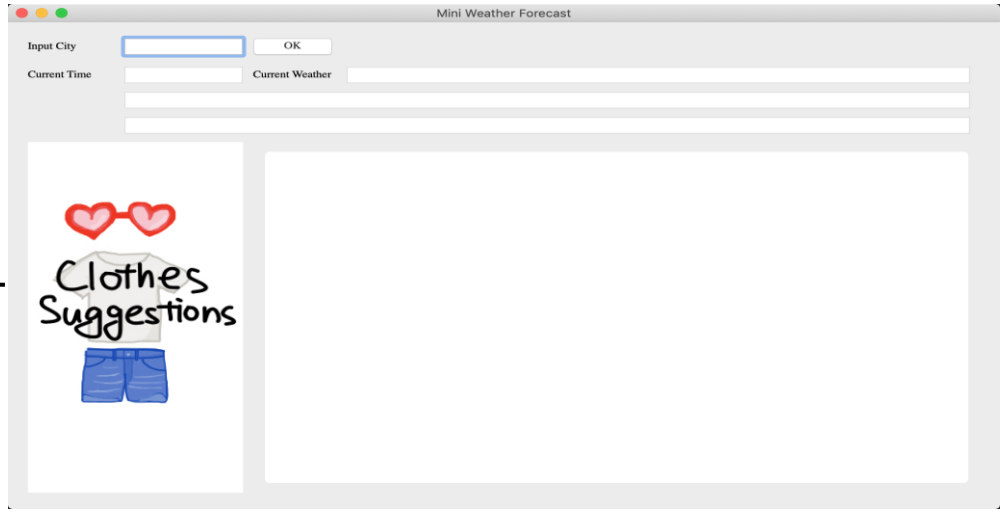
Data Mining

Crawling data based on the *"Hefeng Weather" API*

Data Analysis

Analyzing the *weather parameters*, and build the *bar graph*. Build our own **Clothes Library** matching with the weather.

Using **PYQT5** for visualization



Advantages

Light-weight-clothes-matching

User firendly—easy to operate

Global Location and good accuracy

Prospects

Making it to *moblie* application (app) or *web-based* application

More feature can be added, for example: *enlarge* our clothes *library*, *activity recommendation*.etc.

Dependencies

QTPY5, python3.6, HEFENG Weather API
